# 1 REQUIREMENTS

**OS:** Windows 7 and higher

**RAM:** min 4GB

The installation of a particular version of the program depends on the settings of your system (**System Type**)

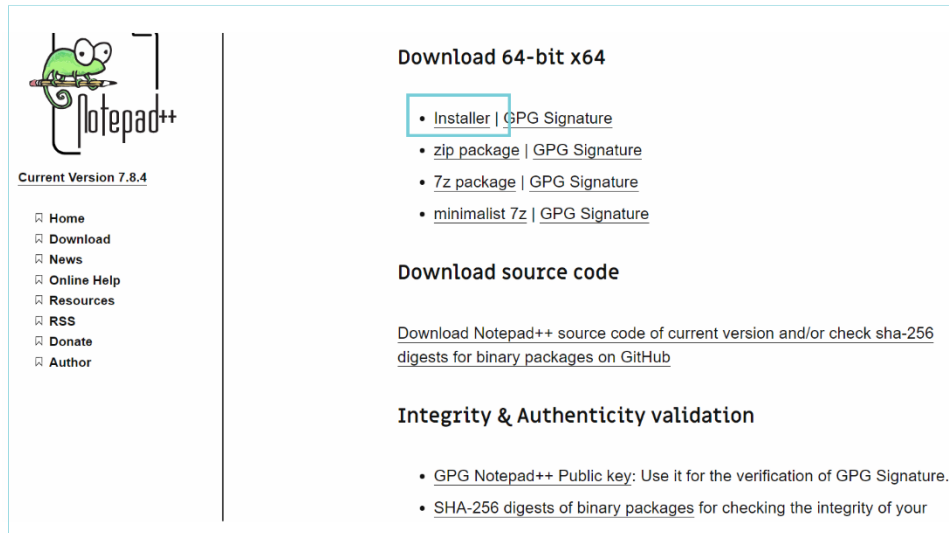

## 2 INSTALLATION PROCESS

Depending on your system, select the required version and install the following programs \*:

### 2.1 [7-ZIP](#) (OPTIONAL)

### 2.2 [NOTEPAD++](#) (OPTIONAL)

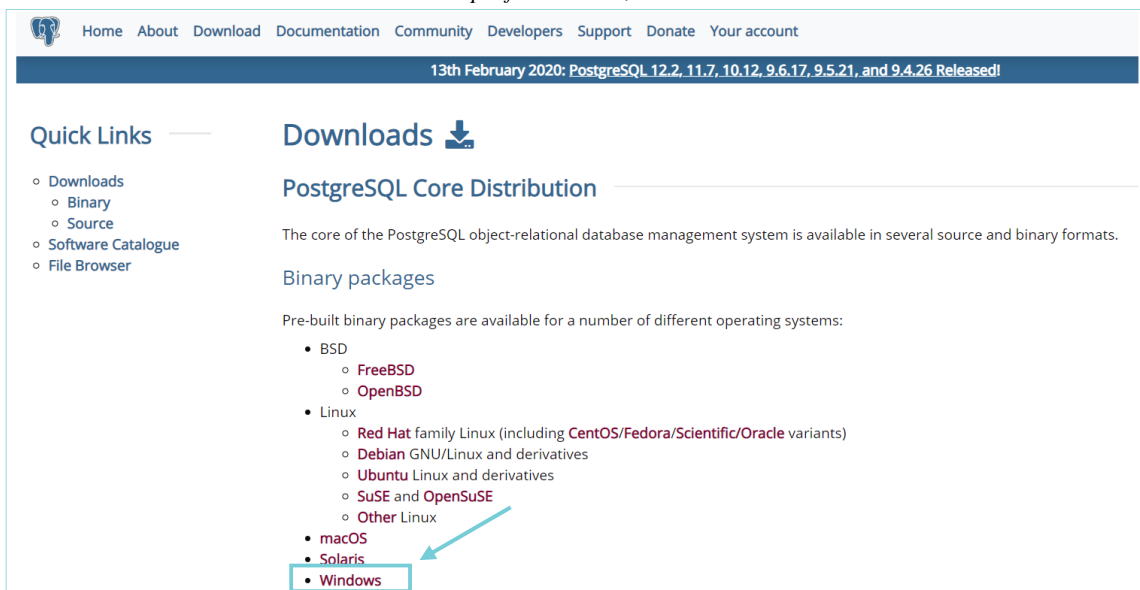

*example for 64-bit OS*

The screenshot shows the Notepad++ website. On the left is a sidebar with links: Home, Download, News, Online Help, Resources, RSS, Donate, and Author. The main content area is titled "Download 64-bit x64" and lists four options: "Installer | GPG Signature" (highlighted with a red box), "zip package | GPG Signature", "7z package | GPG Signature", and "minimalist 7z | GPG Signature". Below this is a section "Download source code" with a link to download source code or check sha-256 digests on GitHub. At the bottom is a section "Integrity & Authenticity validation" with links for GPG public key and SHA-256 digests.

### 2.3 [POSTGRESQL](#)

*example for windows, 64-bit OS*

The screenshot shows the PostgreSQL website. The top navigation bar includes links: Home, About, Download, Documentation, Community, Developers, Support, Donate, and Your account. A banner below the navigation bar reads "13th February 2020: PostgreSQL 12.2, 11.7, 10.12, 9.6.17, 9.5.21, and 9.4.26 Released!". The main content area is titled "Downloads" and "PostgreSQL Core Distribution". It states that the core is available in several source and binary formats. Under "Binary packages", it lists pre-built binary packages for various operating systems: BSD (FreeBSD, OpenBSD), Linux (Red Hat family Linux, Debian GNU/Linux, Ubuntu Linux, SuSE and OpenSUSE, Other Linux), macOS, Solaris, and Windows (highlighted with a red box and a red arrow).

**Windows installers**

**Interactive installer by EnterpriseDB**

**Download the installer** certified by EnterpriseDB for all supported PostgreSQL versions.

This installer includes the PostgreSQL server, pgAdmin; a graphical tool for managing and developing your databases, and StackBuilder; a package manager that can be used to download and install additional PostgreSQL tools and drivers. Stackbuilder includes management, integration, migration, replication, geospatial, connectors and other tools.

This installer can run in graphical or silent install modes.

The installer is designed to be a straightforward, fast way to get up and running with PostgreSQL on Windows.

Advanced users can also download a **zip archive** of the binaries, without the installer. This download is intended for users who wish to include PostgreSQL as part of another application installer.

**Platform support**

The installers are tested by EnterpriseDB on the following platforms. They can generally be expected to run on other comparable versions:

PostgreSQL Version	64 Bit Windows Platforms	32 Bit Windows Platforms
12	2019, 2016, 2012 R2	
11	2019, 2016, 2012 R2	
10	2016, 2012 R2 & R1, 7, 8, 10	2008 R1, 7, 8, 10

Select version **PostgreSQL 12.2**

## PostgreSQL Database Download

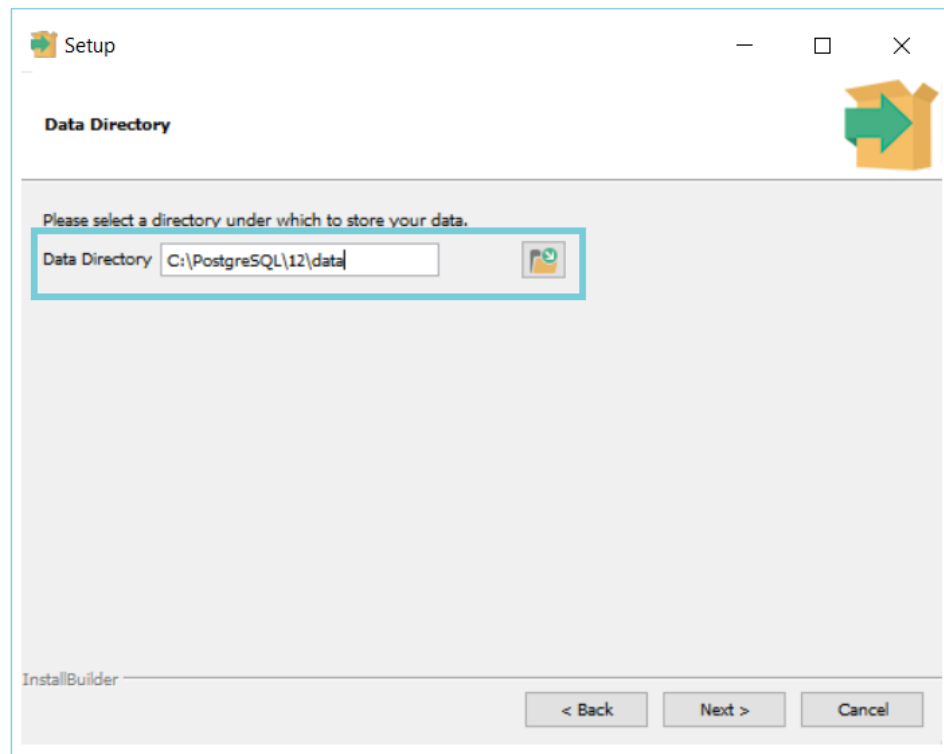

PostgreSQL Version	Linux x86-64	Linux x86-32	Mac OS X	Windows x86-64	Windows x86-32
12.2	N/A	N/A	Download	Download	N/A
11.7	N/A	N/A	Download	Download	N/A
10.12	Download	Download	Download	Download	Download
9.6.17	Download	Download	Download	Download	Download
9.5.21	Download	Download	Download	Download	Download
9.4.26	Download	Download	Download	Download	Download
9.3.25 (Not Supported)	Download	Download	Download	Download	Download

**NOTE:** If your OS windows 32-bit or Linux, please select PostgreSQL 10.12.

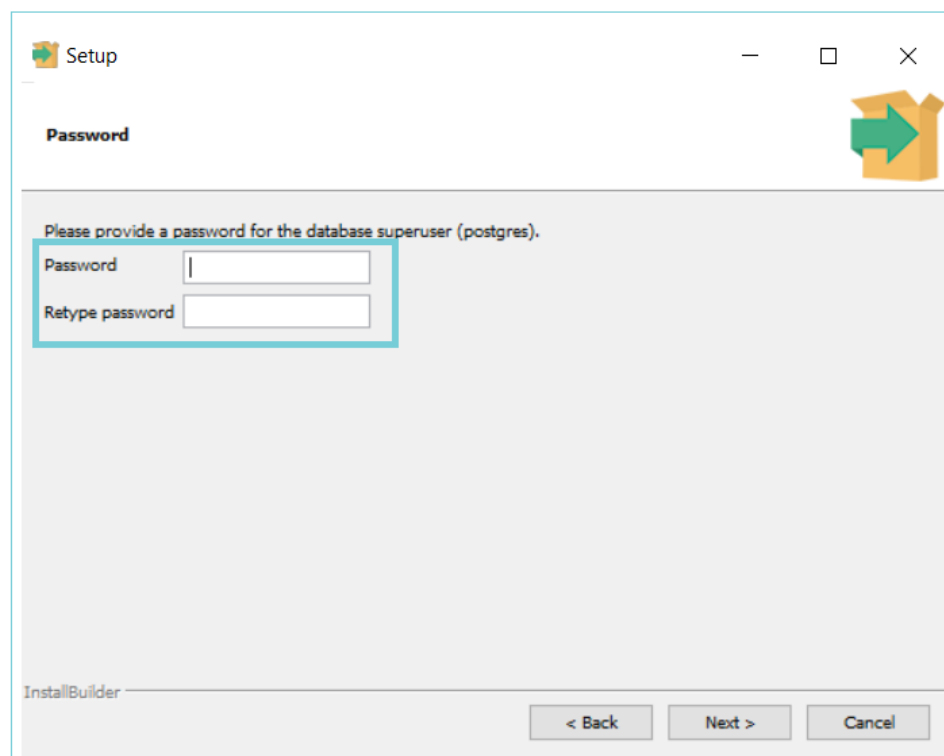

Pay attention that some functionality may not be available.

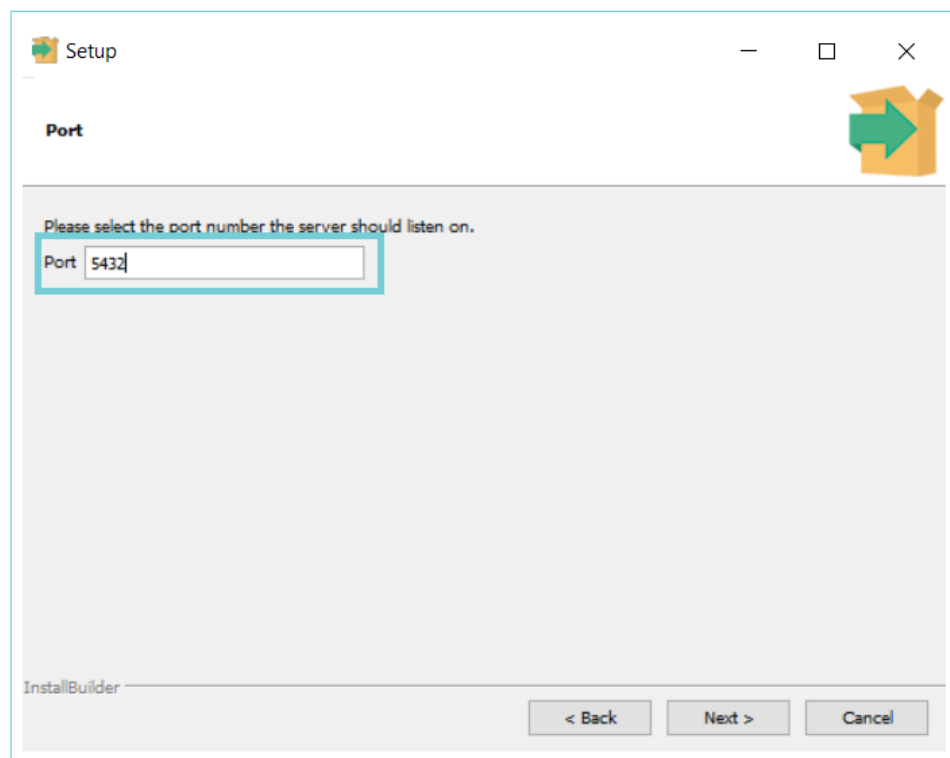

Select directory when you have **enough space**

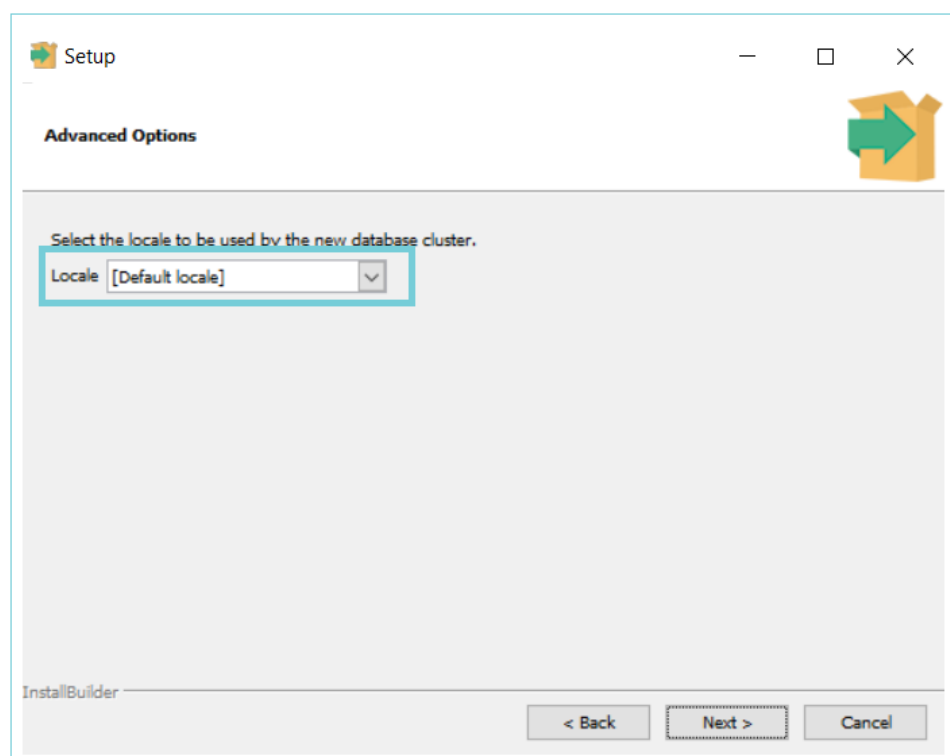

Create a password for the superuser

Leave the port by default - 5432

Leave the local by default

## 2.4 DBEAVER

The screenshot shows the DBEAVER Community website. The header includes the DBEAVER logo, the text "DBEAVER Community", and a search bar. Below the header is a navigation menu with links: Home, About, Download, Sources, Documentation, News, Support, and Enterprise Edition. The main content area is titled "Download" and is divided into two columns. The left column is for the "Community Edition 6.3.5", which was released on February 17, 2020. It is free and open source. The right column is for the "Enterprise Edition 6.3.0", which was released on December 9, 2019. The left column lists download links for Windows, Mac OS X, and Linux. The right column lists features of the Enterprise Edition.

### Download

#### Community Edition 6.3.5

Released on February, 17 2020 ([Milestones](#)).  
It is free and open source ([license](#)).  
Also you can get it from the [GitHub mirror](#).

##### Windows

- Windows 64 bit (installer)
- Windows 64 bit (zip)
- Install from Microsoft Store
- Chocolatey package

##### Mac OS X

- Mac OS X (installer)
- Mac OS X (dmg)
- Mac OS X (zip)
- Brew Cask (brew cask install dbeaver-community)

##### Linux

- Linux Debian package 64 bit (installer)
- Linux RPM package 64 bit (installer)
- Linux 64 bit (zip)
- Snap (sudo snap install dbeaver-ce)
- Flatpak (flatpak install flathub io.dbeaver.DBeaverCommunity)

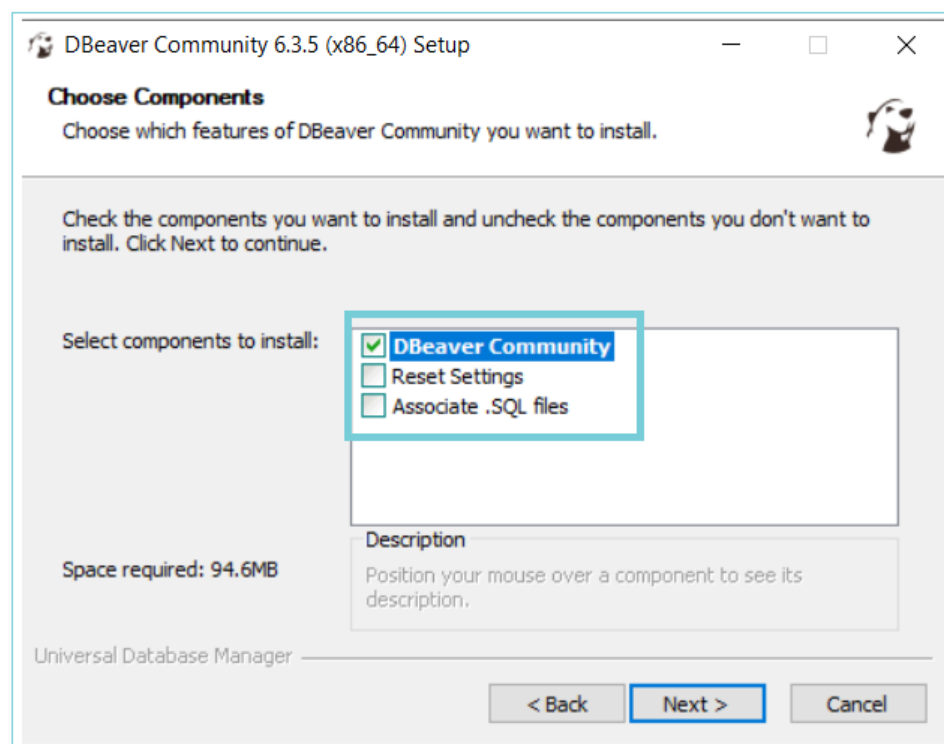

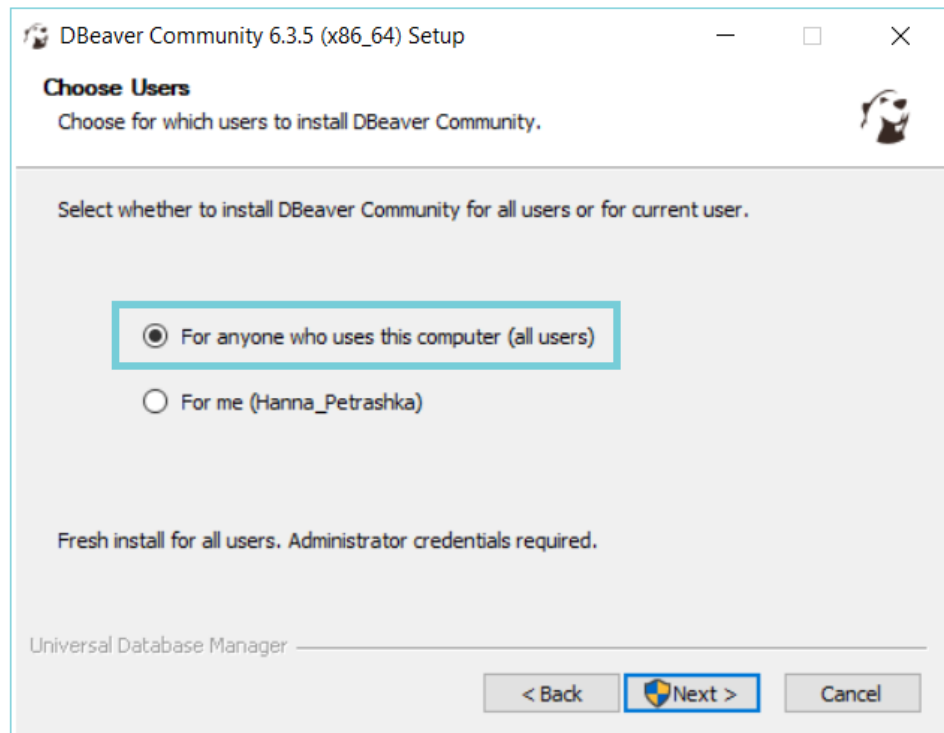

#### Enterprise Edition 6.3.0

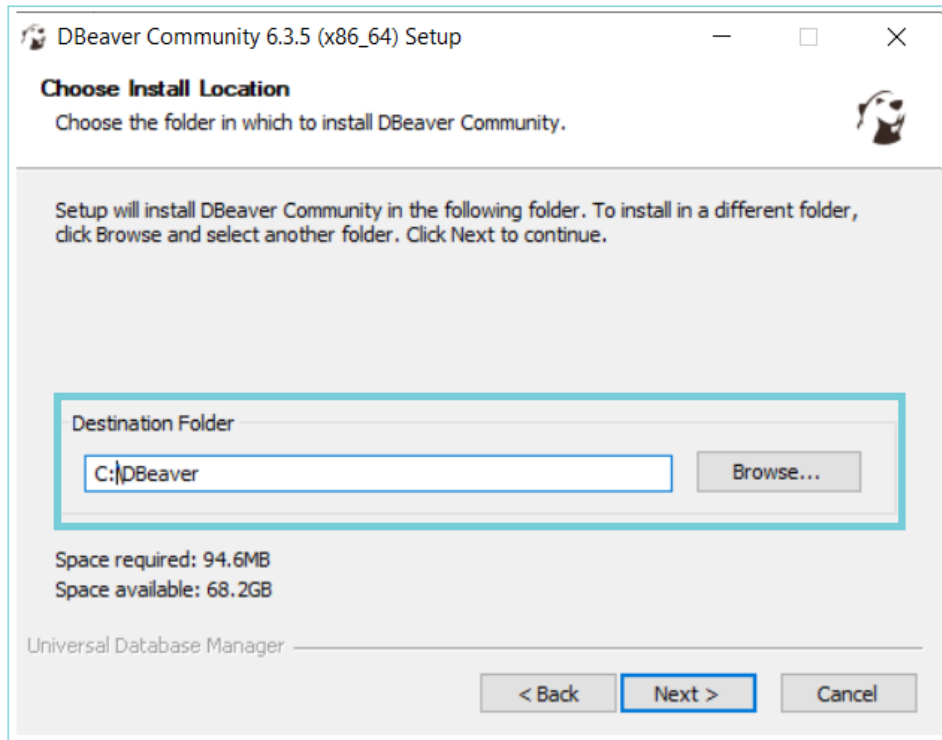

Released on December 9, 2019  
EE version web site: [dbeaver.com](#)  
Trial version is available.

##### Enterprise Edition features:

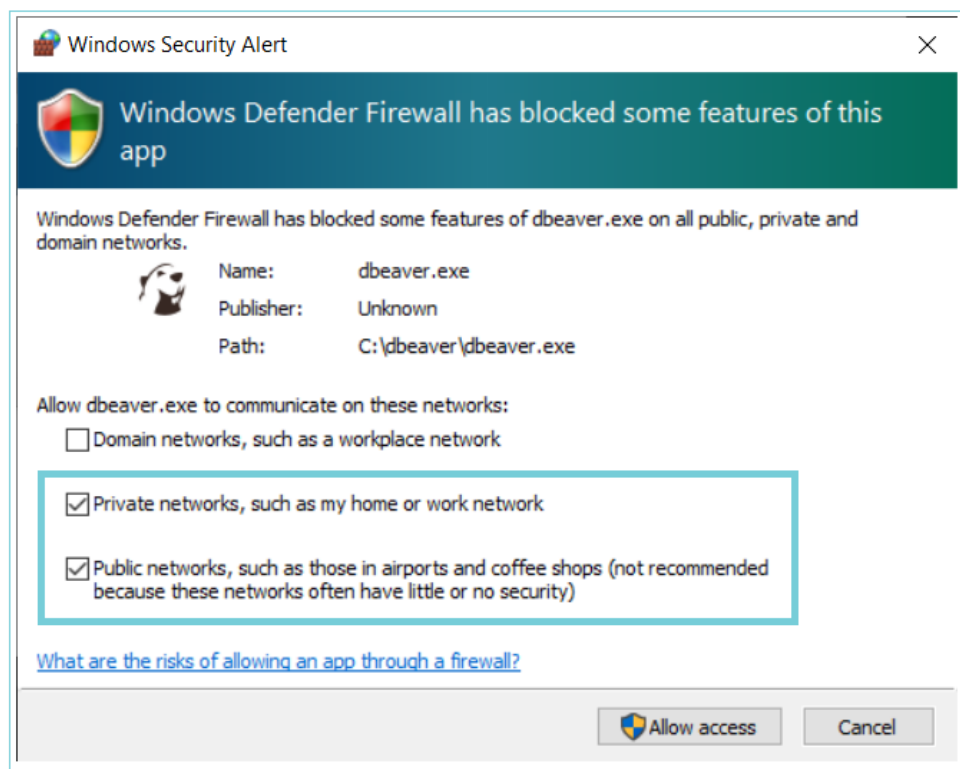

- Support of NoSQL databases:
  - MongoDB
  - Cassandra
  - InfluxDB
  - Redis
  - Amazon DynamoDB
  - Google Bigtable
- Additional drivers configuration for BigData/Cloud databases (Hadoop).
- Most popular JDBC drivers are included in distribution and can be used in offline/limited internet access environment.
- Advanced security (secure storage for user credentials, configuration encryption, master password, etc)
- Additional EE plugins:
  - Visual SQL query builder
  - Task scheduler
  - Analytical charts generation
  - Mock data generator
  - Advanced schema compare/migration tools
  - Office formats support (XLS) for data export
  - Advanced SQL execution plan viewer
  - Integrated Git (version control for scripts and configuration)
- Persistent Query Manager database (allows to track SQL

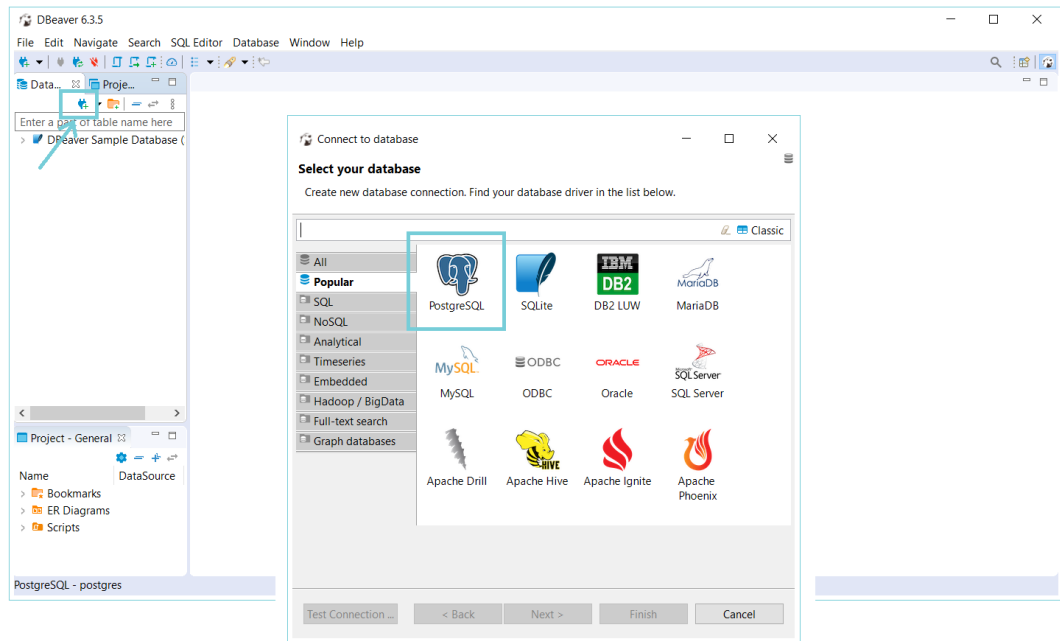

Run the DBeaver and allow access

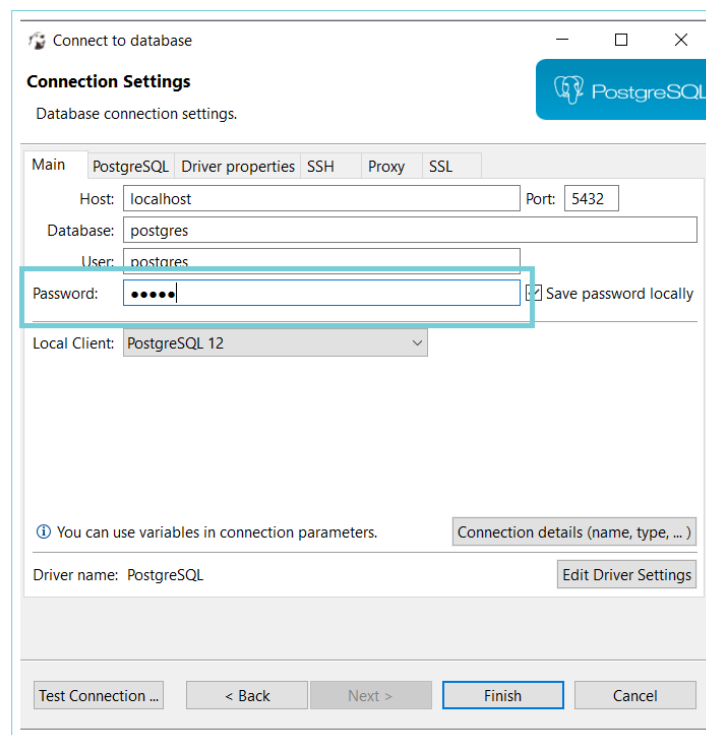

\* in the archive 'Install\_x64' we have already prepared all the installations for the Windows 64-bit OS

### 3 DB SETUP

Create New DB Connection -> select PostgreSQL -> Next

Enter the password that you specified during the installation PostgreSQL

The screenshot shows the 'Connect to database' dialog box with the 'PostgreSQL' tab selected. The 'Main' sub-tab is active, displaying connection parameters: Host (localhost), Port (5432), Database (postgres), User (postgres), and Password (masked with dots). A checkbox for 'Save password locally' is checked. The 'Local Client' is set to 'PostgreSQL 12'. A blue arrow points to a button labeled 'Connection details (name, type, ...)' which is highlighted with a red rectangle. Below this button is the 'Driver name: PostgreSQL' and an 'Edit Driver Settings' button. At the bottom are buttons for 'Test Connection ...', '< Back', 'Next >', 'Finish', and 'Cancel'.

Connect to database

**Connection Settings**

Database connection settings.

Main PostgreSQL Driver properties SSH Proxy SSL

Host: localhost Port: 5432

Database: postgres

User: postgres

Password: ..... ☒ Save password locally

Local Client: PostgreSQL 12

[You can use variables in connection parameters.](#)

**Connection details (name, type, ...)**

Driver name: PostgreSQL [Edit Driver Settings](#)

[Test Connection ...](#) < Back Next > **Finish** Cancel

The screenshot shows the 'Connect to database' dialog box with the 'General' tab selected. The 'Connection name' is 'PostgreSQL - postgres'. The 'Connection type' is 'Development', with a red rectangle around the dropdown and an 'Edit connection types' button. A blue arrow points to this button. The 'Connection folder' is '<None>'. The 'Description' field is empty. At the bottom are buttons for 'Test Connection ...', '< Back', 'Next >', 'Finish', and 'Cancel'.

Connect to database

**General**

General connection settings.

Connection name: PostgreSQL - postgres

Connection type: Development [Edit connection types](#)

Connection folder: <None>

Description:

Miscellaneous ☐ Show system objects ☐ Show utility objects

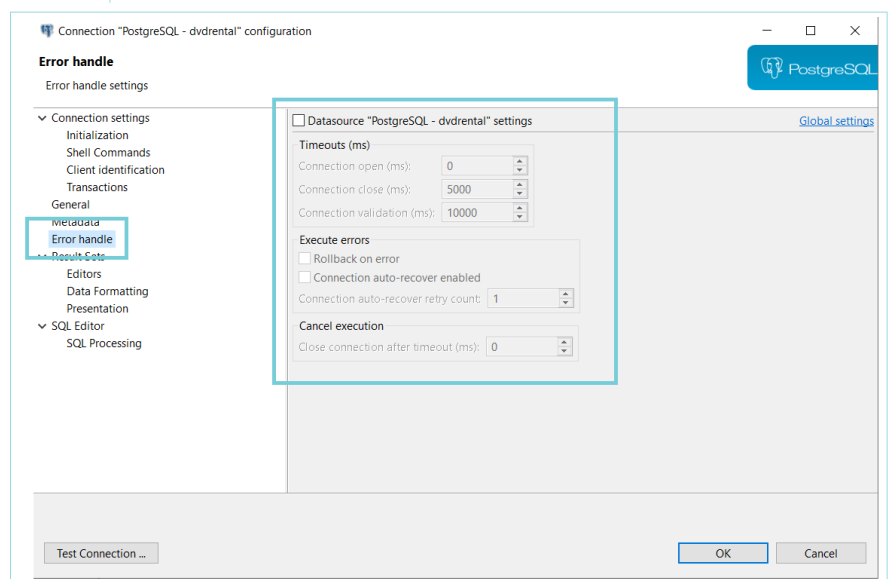

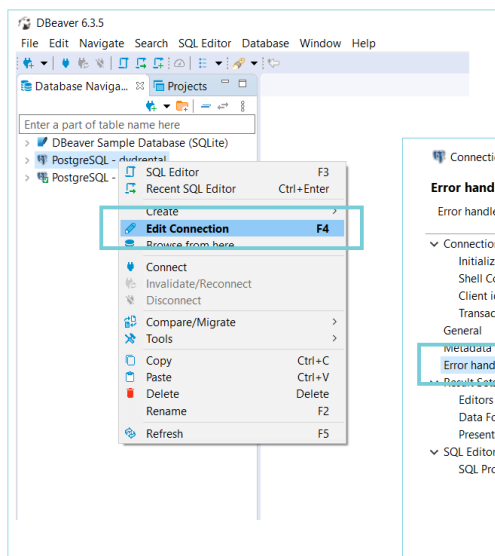

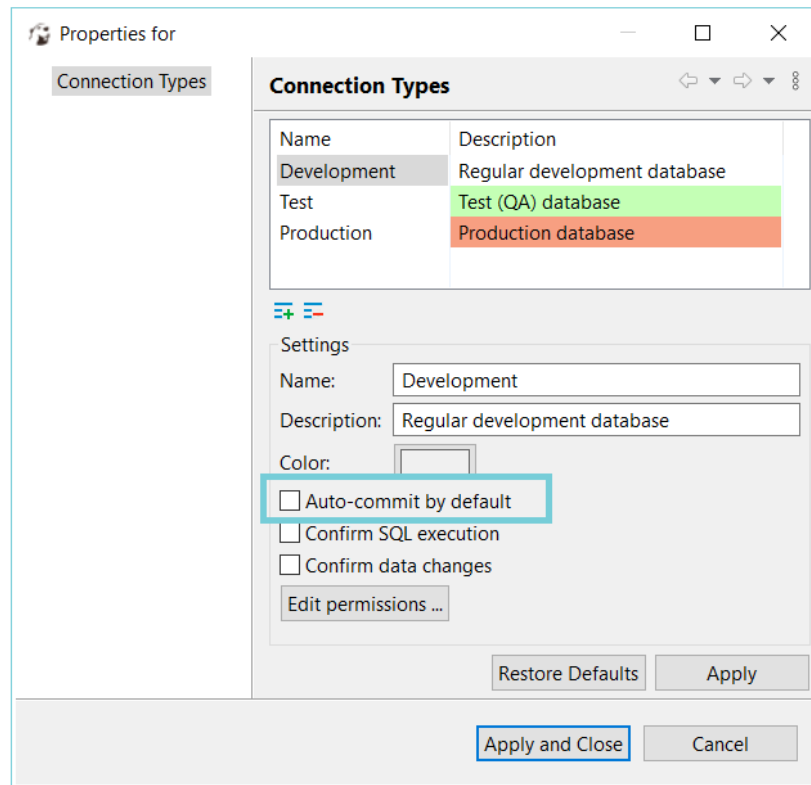

Security ☐ Read-only connection [Edit permissions ...](#)

Filters [Databases / Catalogs Schemas / Users](#) [Tables](#) [Columns](#)

[Connection initialization settings](#)

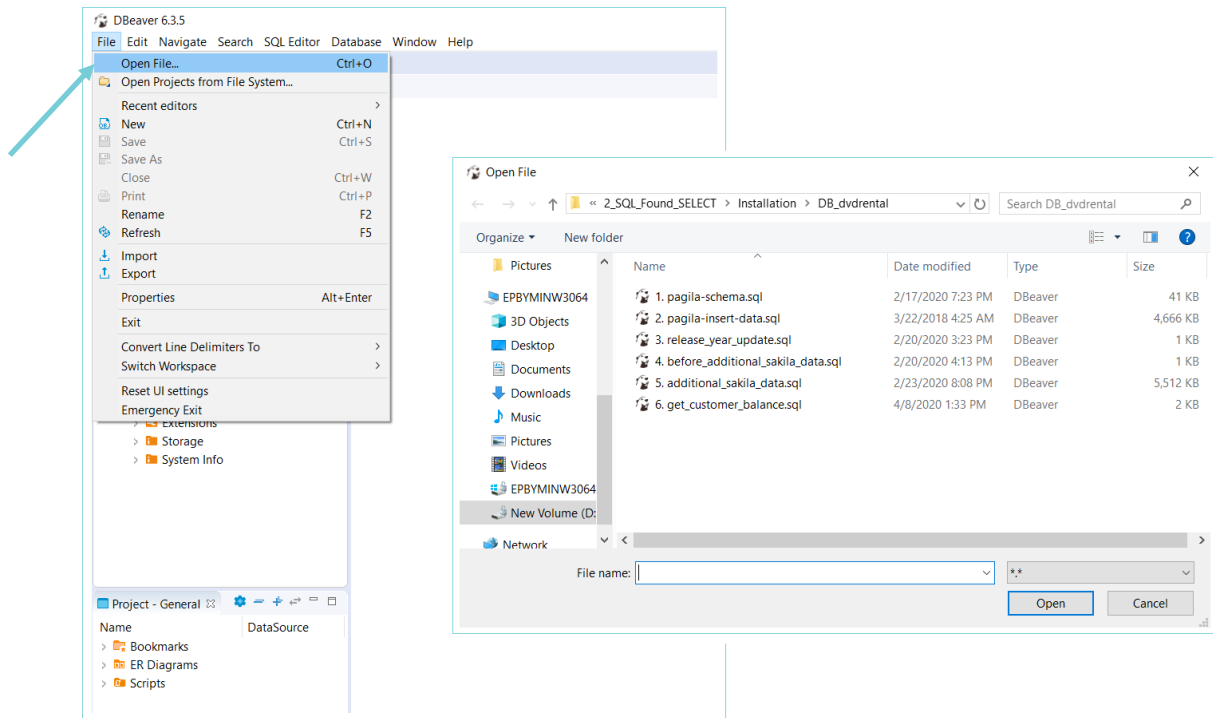

[Shell Commands](#)

[Test Connection ...](#) < Back Next > **Finish** Cancel

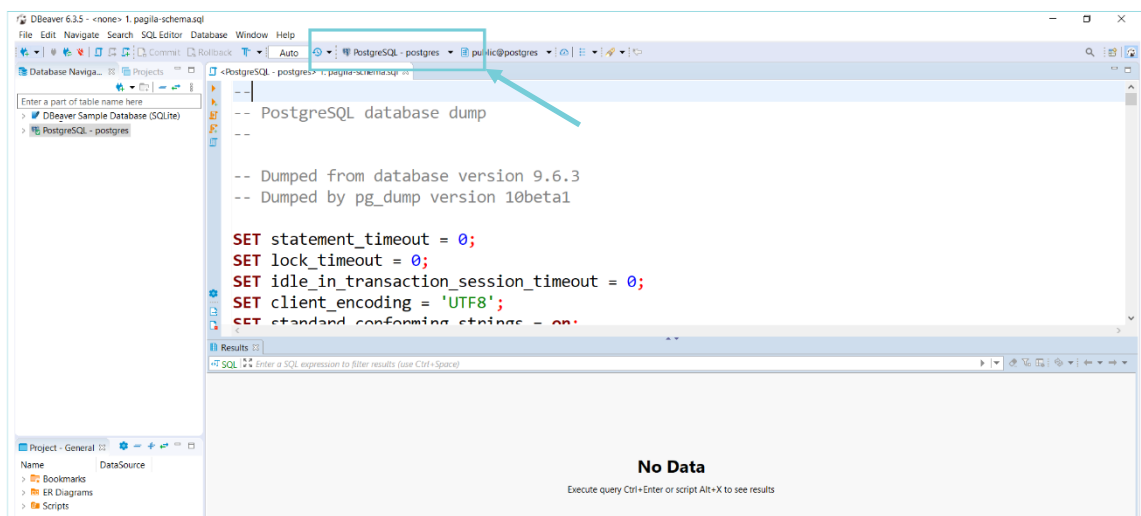

Download and unzip 'DB\_dvdrental'.

In the DBeaver open the file in the numerical order.

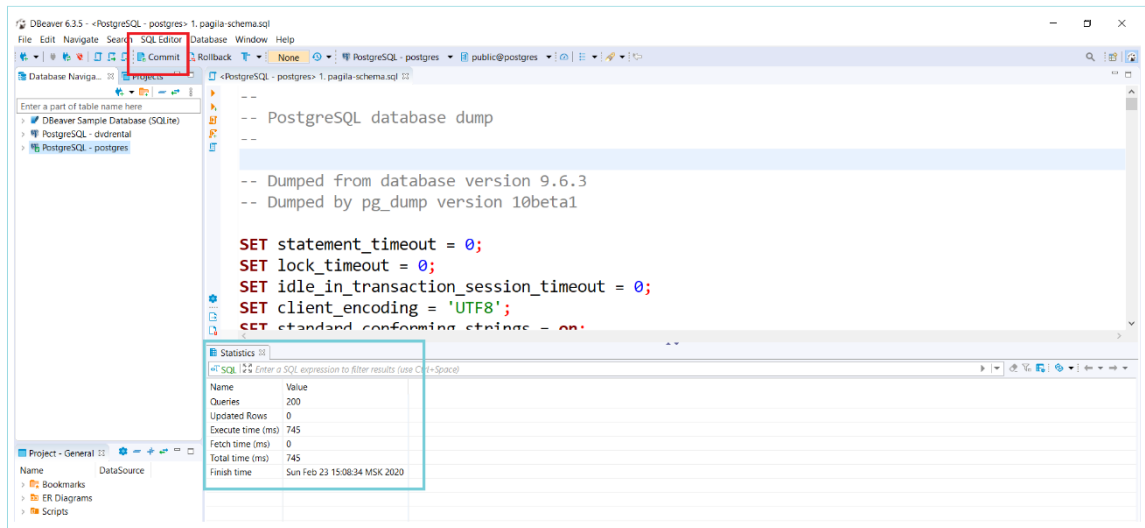

Make sure the correct Data Source is selected

Run first script '1. pagila-schema.sql' (hotkeys: ALT+X)

Wait for completion!!!

After the successful execution of the script you see window with 'Statistics',  
Click **COMMIT**

Run the rest of the scripts in the same way (in the numerical order):

2. pagila-insert-data.sql *-- script runs for a long time*

Statistics	
SQL Enter a SQL expression to filter results (use Ctrl+Space)	
Name	Value
Queries	46296
Updated Rows	46273
Execute time (ms)	40169
Fetch time (ms)	0
Total time (ms)	40169

3. release\_year\_update.sql

4. before\_additional\_sakila\_data.sql

5. additional\_sakila\_data.sql *-- script runs for a long time*

Statistics	
SQL Enter a SQL expression to filter results (use Ctrl+Space)	
Name	Value
Queries	32091
Updated Rows	32091
Execute time (ms)	18286
Fetch time (ms)	0
Total time (ms)	18286

6. get\_customer\_balance.sql

After each script press **COMMIT**
